## Manager, Technical Infrastructure Program Manager, US East Capacity Planning, Capacity Delivery Planning

### Job Location

United States  
Remote work from: USA

### Base Salary

USD 40 - USD 50

### Employment Type

Full-time, Part-time

### Description

AWS Infrastructure Services owns the design, planning, delivery, and operation of all AWS global infrastructure. In other words, we're the people who keep the cloud running. We support all AWS data centers and all of the servers, storage, networking, power, and cooling equipment that ensure our customers have continual access to the innovation they rely on. We work on the most challenging problems, with thousands of variables impacting the supply chain — and we're looking for talented people who want to help.

You'll join a diverse team of software, hardware, and network engineers, supply chain specialists, security experts, operations managers, and other vital roles. You'll collaborate with people across AWS to help us deliver the highest standards for safety and security while providing seemingly infinite capacity at the lowest possible cost for our customers. And you'll experience an inclusive culture that welcomes bold ideas and empowers you to own them to completion.

As a manager in this role, you will lead a team responsible for forecasting, planning, and optimizing data center capacity in the 0-2Y horizon to meet the needs of our rapidly expanding cloud services. The role requires a strategic thinker with strong analytical skills, excellent leadership capabilities, and deep understanding of data center infrastructure and operations.
